

# SLR 2000

## Waterproof Membrane

Cureflex SLR2000 is a commercial grade permanent flexible sealer better described as a one-part modified 'liquid rubber' solution that provides a protective membrane barrier over substrates in wet area applications. It is designed for commercial interior and exterior use.

Cureflex SLR2000 is ready for immediate use for interior and exterior applications. It has strong adhesion properties and remains extremely flexible after curing. It offers benefits of both a polyurethane and acrylic based membrane. It is designed to withstand water retention and permanently wet conditions. When fully cured, Cureflex SLR2000's unique formulation provides an excellent compatible surface for bonding other construction materials such as: tile adhesives, renders, screeds without the fear of material rejection.

Developed using technological advanced polymer structures, Cureflex SLR2000 has superior flexible plastomeric properties (FEP), offering outstanding waterproof advantages such as low water vapour transmission properties and the ability to withstand permanently wet conditions without re-emulsification of cured membrane.

### Typical Areas of Use

- Bathroom showers
- Ensuites and powder rooms
- Laundries and kitchens
- Balconies, terraces, patios, verandahs and decks

### Features & Benefits

- Non-toxic and non-flammable
- Easy to apply – brush or roller
- Strong adhesion properties
- Durable tough seamless finish
- Low odour and free of dangerous fumes
- One-part solution ready for immediate use
- Solvent free – water based 'liquid rubber'
- Superior flexibility and elastomeric properties
- High elongation and excellent coverage per M<sup>2</sup>
- Able to withstand continuous wet environments and ponding
- Moisture barrier between concrete substrates and timber flooring
- Excellent vapour barrier with low water vapour transmission properties
- General wet areas to wall and floor substrates to prevent moisture ingress
- Moisture barrier between timber substrates and other toppings such as screeds, tiles and vinyl

Cureflex SLR2000 is a Class III membrane that complies with the AS/NZS 4858:2004 and exceeds the AS3740 requirements set out under "Waterproofing Wet Areas in Residential Buildings" codes. Tested and approved by CSIRO Technical Assessment No 349.

Australian Made, Designed & Protected.
