Effortless elegance...

Introducing the latest addition to the Trims 'n' Finishes™ range, our new FlatMate™ Skirting Profile. The distinctive design of the extrusion allows for the installation of a skirting tile that sits flush with finished wall plaster above.

FlatMate™ Skirting Profile is manufactured from high-grade aluminium, features an anti-corrosive anodised coating and is available in satin metallic silver and satin flat black finishes for a touch of modern elegance.

Applications aren't limited to the bathroom though and include...

- Bathrooms, kitchens and laundries (tiles to painted plaster).
- Living rooms and bedrooms (timber laminate to painted plaster).
- Balconies, terraces and alfrescos (tiles to finished render).

The beauty of the design assists in achieving a laser straight tile-line and eliminates the need to caulk or fillet grout the top of the skirting tiles.

When properly integrated into the waterproofing system, FlatMate™ Skirting Profile can also function as a waterstop in and along wet area perimeters.

FlatMate™ Skirting Profile is available to order in lengths of 2.7m and 5.4m.

This design is registered with IP Australia (no. 202014718).
